

## **Introduction to the Industrial Revolution**

Make a list of all of the appliances, machines, and tools you use that require electricity, batteries, natural gas & gasoline. Begin with the things you need first thing in the morning, go through your day until you get to the things you use just before you go to sleep.

Write a paragraph (at least 5-7 complete sentences) describing what your day would be like if none of the things you listed above ever existed. If you lived in the nineteenth century, before any of these things were invented, what would you do? Explain how would you cook your food, get to different places during the day, study at night, and be entertained. Use descriptive details and try to think through all the possible problems and obstacles you might face.
